

SP Series Order Picker

## Clearly Elevated Performance

From the wide-open operator window to its rock solid stability system, Crown's SP Series order pickers are designed to help busy order pickers maintain confidence at height and efficiently handle a variety of tasks.

## Visibility that Drives Success

Clear vision is the foundation of operator confidence. With the largest window of any stockpicker, the Crown SP Series makes operators clearly more productive.

The SP Series order picker forklift provides the most unobstructed view and eliminates “tunnel vision,” increasing operator confidence – especially at height.

## Stability that Builds Confidence

Ample use of steel – from the mast to the side gates, and everything in between – means less sway and more operator certainty for greater all-around productivity.

That's why Crown engineers developed the most stable mast in the industry with heavy gauge steel, wide outer C-channels and inner I-beams, robust stabilizing angular cross members and exclusive vertical mast braces.

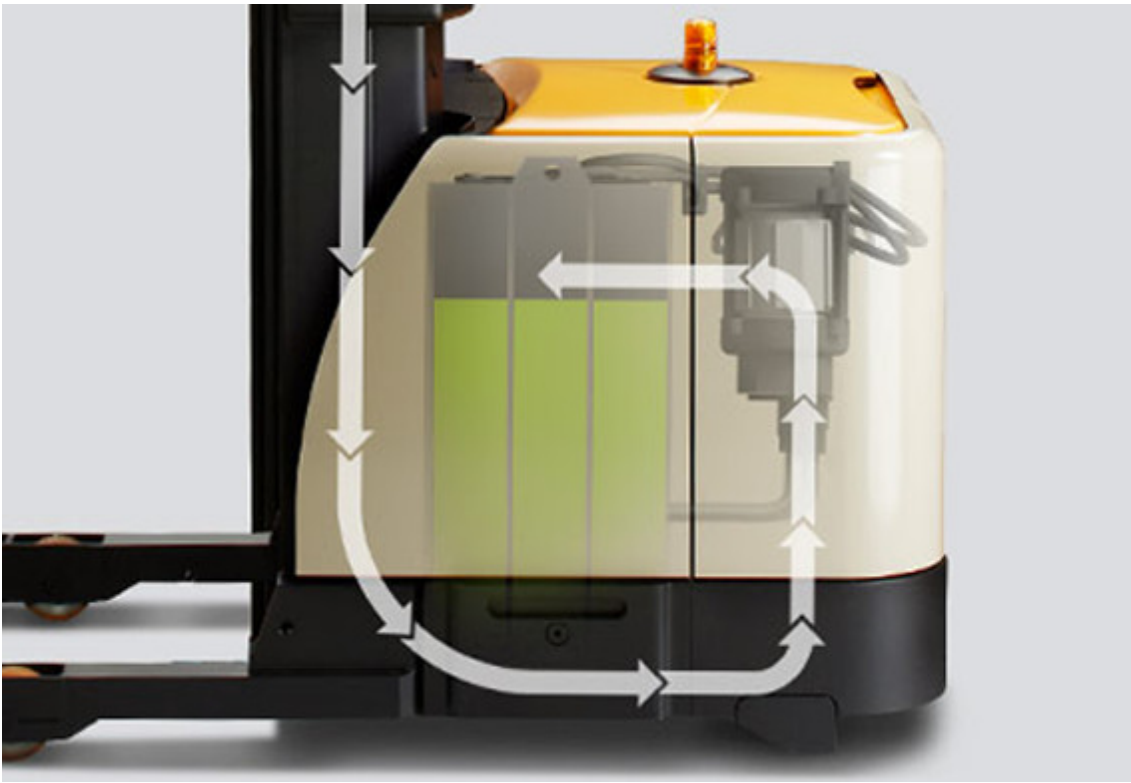

With Crown's Stability Stance, operators have four points of solid contact with the lift truck when stopping and starting from 9 meters in the air.

## Performance that Rises Above

Crown's SP Series order picker supports a variety of operational needs while delivering speeds that ensure the fastest cycle times.

The SP Series' standard variable height sensor measures platform height and determines maximum allowable speed.

Regenerative lowering, available on some SP Series order picker models, captures lost energy and returns it to the battery, equating to fewer battery changes, longer shifts and reduced costs. Linear speed control, an option on many competitors' trucks, is standard on all SP models and utilizes a variable height sensor to measure platform height and determine the optimum speed level.

## Longevity that Pays

With longer shift life, proven diagnostics, and global parts/service network, Crown SP order picker users are sure to experience more satisfaction, longer lift truck life and lower total costs.

Some SP Series models feature a 36-volt battery, which enables common batteries and chargers to be used across your lift truck fleet.

With Crown's vertically integrated manufacturing and aftermarket services, total cost of ownership can be substantially lower over time.

## SP Series Model Types

### High-Level Order Picker with Fixed Forks

The SP Series high-level order picker is suitable for guided VNA and free-ranging applications.

### High-Level Order Picker with Lifting Forks

The SP Series high-level order picker with auxiliary mast provides ergonomic relief for the operator. It is suitable for guided VNA or free-ranging applications.

### High-Level Order Picker with Fixed Forks

The SP Series 4-wheel straddle order picker is suitable for NA and VNA applications. It is the highest capacity order picker in the line, handling heavy palletized loads at heights up to 9.3 meters.

## Key Options and Accessories

---

### Wire Guidance ▲

Wire guidance automates steering control, allowing for minimal aisle widths.
