Do Twice the Work

The Wave Work Assist Vehicle is a revolutionary, mobile productivity tool that allows one person to safely and efficiently accomplish the work of two, traveling twice as fast as the average walking speed.

- Reach working heights of up to 5 meters supported by a four-point safety system
- Travel up to 8 km/hour to reduce downtime between worksites
- Simultaneously elevate operator and load for smoother, more efficient workflows
- Maneuver through tight aisles and doorways as narrow as 813 mm

Safety at Every Turn

The Wave's built-in system of protection and control starts the moment the operators turns the key switch. Crown's Access 1 2 3 System coordinates a functional display, manages lift/lower operations and controls travel speeds, steering and braking.

The Wave's four point safety system provides enhanced operator control and safety.

Interlocking Gates

Interlocking gates must be closed to raise or lower above 508 mm.

Platform Sensors

Hand Sensors

Dual Foot Pedals

Productivity that Pays for Itself

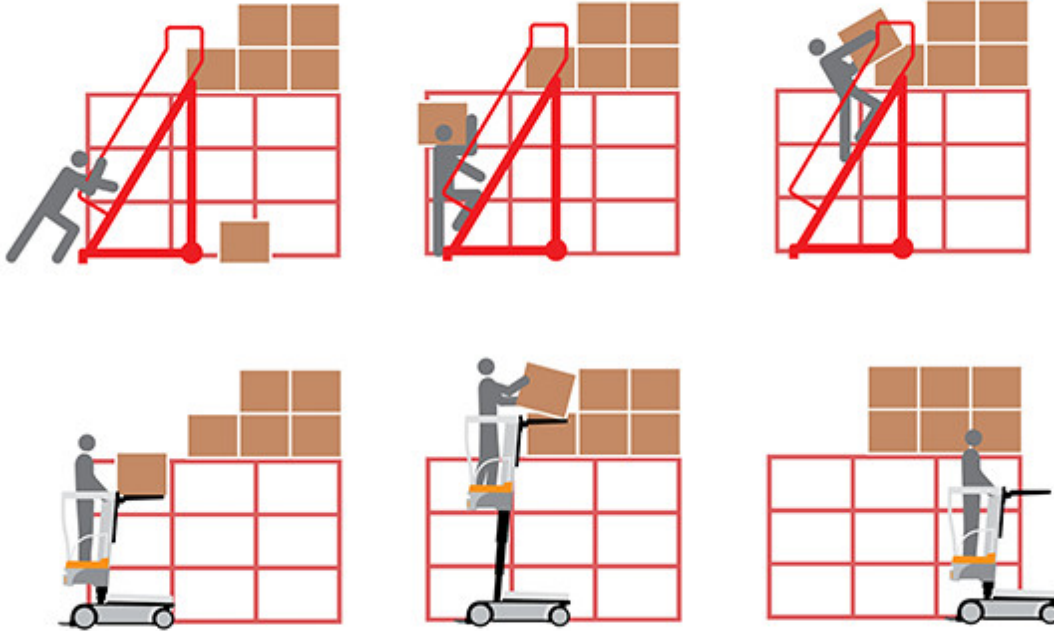

Experience a world without the risks of traditional ladders; employee falls and injuries, costly worker compensation claims, expenses of lost time and productivity, and expensive product damage.

Many Wave customers report a complete return on investment within one year of purchase.

Reduced operational expense

- ✔ **Reduced worker's compensation cost**
- ✔ **Reduced lost-time expense**
- ✔ **Reduced product handling and damage costs**

Flexibility to Handle Virtually any Application

Nearly every application that involves the movement of people or products can benefit from the Wave's time- and labor-saving advantages. It is ideal for operations in busy, confined spaces where workers move with short and long travel runs, and where small loads are handled.
